## INTRODUCTION

In 1965 imports of chemical, petroleum and rubber products reached a total value of \$1,098 million. Of this total, chemicals and chemical products accounted for \$534 million, crude petroleum and petroleum and coal products for \$490 million and rubber products \$74 million. In 1966 the corresponding totals were \$1,130 million and a preliminary estimate for 1967 indicates a total of \$1,270 million.

The Department of Industry publishes its analysis of imports of chemicals to identify opportunities for additional manufacturing operations in Canada. Enquiries relating to this report should be directed to the Chemicals Branch.

## EXPLANATORY NOTES

Chemical Import Trends, 1965 has been prepared as a supplement to Chemical Import Trends, 1956-1964, published in 1966.

The report is in two parts. Part I lists those chemical, petroleum, plastic and rubber commodities and other materials by class as they are reported in "Trade of Canada Imports 1965". Part II lists those chemicals belonging to the "n.e.s." classes (see page x) for which a special analysis has been made for the months of March, June, September and December, 1965. Only the total quantity and value for the four months for each item is reported. No attempt has been made to make an annual estimate.

The DBS class number and Customs Tariff item number are indicated as references for each product. Where more than one class and tariff item are shown, these are listed independently of one another in numerical sequence. The tariff items listed are those under which most of the value of imports were entered at customs ports. A maximum of six tariff items is shown for any class. These listings are not exhaustive, nor are they limited to "correct" tariff items. Persons wishing official rulings on the tariff status of particular commodities should consult the Department of National Revenue, Customs and Excise Division, Ottawa.

Where duplications appear between Part I and Part II, the data shown in Part II can be taken as additional to that in Part I. These duplications among classes occur because of description variations and tradenames.

The following symbols and abbreviations are used:

—	— No quantity recorded
doz. pr.	— Dozen pairs
oz.	— Weight in ounces
lb.	— Weight in pounds
kg.	— Weight in kilograms
sq. yd.	— Square yards
gal.	— Gallons (Canadian)
bbl.	— Barrels
No.	— Number
n.e.s.	— Not elsewhere specified
n.f.i.	— Not further identified

## Section 3

The first part of the section deals with the general principles of the law of contract. It states that a contract is a legally binding agreement between two or more parties. The law of contract is concerned with the enforcement of such agreements. The second part of the section deals with the formation of a contract. It states that a contract is formed when there is an offer and acceptance of that offer. The offer must be made by a person who is capable of entering into a contract. The acceptance must be made by a person who is also capable of entering into a contract. The third part of the section deals with the content of a contract. It states that a contract must contain certain essential terms. These terms are the parties to the contract, the subject matter of the contract, and the consideration for the contract. The fourth part of the section deals with the discharge of a contract. It states that a contract can be discharged in several ways. These ways are by agreement, by operation of law, and by breach of contract. The fifth part of the section deals with the remedies for breach of contract. It states that the remedies available for breach of contract are damages, specific performance, and injunction.
